Life in this universe moves in cycles, transforms, reproduces and evolves to develop and sustain in this creation. The Life forces of creation can be grouped into two nonphysical masculine forces and five physical feminine forces to make the duality in the nature. These forces would dance in harmony to form the seven dimensions interacting with each other, Thus bringing the microcosm and macrocosm together in a grand unification. All atoms in this universe are in unison, quantumly connected with one and other as a single body that's playing the symphony of Birth, Life and Death. Our universe is governed by the limits and constants programed into these seven dimensions of duality. The Seven Grouping System discovered by humanity was learnt by close observation of how nature operates all the life in the universe. This system of understating also works well due to our nature of learning fits well at the package of 7

Humanity is a seven headed snake trying to comprehend their existence in Seven different ways.

The seven stages of human life with the twelve-year solar cycle gives eighty-four years for humans to complete a full life span which again is debatable topic like the **84** grouping system mentioned in this Book.

This grouping system are manmade for simplicity of some complex phenomena occurring in the nature
